

SEA ENVIRONMENTAL AND ENERGY POLICY

SEA Group is strongly committed in combining the core value of respecting and safeguarding the environmental assets with development.

Its environmental and energy policy is guided by the following principles:

- *Firm conviction of the importance, for the sustainable development of its airports, of all environmental issues, for which it is intended to go beyond mere compliance with the regulation, to tent to a sustainable reduction of socio-environmental impacts and to the simultaneous growth of sharing of value with the communities of the surrounding territories.*
- *Continuous commitment in improving its environmental and energy performance.*
- *Development and promotion, together with the competent regulatory bodies and the aviation partners, of regulatory, technical and commercial solutions, helping to encourage adoption of both latest generation aircraft on its own airports and operating procedures that are consistent with the objectives of sector's sustainability and effective to contain environmental impacts on the surrounding territory.*
- *Awareness and active involvement of all stakeholders in the airport system in a responsible commitment oriented to respect and the safeguard the common heritage represented by the environment in which we operate.*
- *Progressive introduction of construction and maintenance solution to improve energy efficiency and environmental sustainability of its airport infrastructures.*
- *Priority of choice for the purchase of products and services that adopt environmental sustainability criteria in line with SEA policies, with particular attention to energy saving, air and noise emissions reduction, water consumption and reduction in the quantity of waste produced and disposed of.*
- *Aligned with aviation organizations, international agreements and programs, and peer with European airports' best practices, SEA Group is committed to reducing in absolute basis its controlled emissions, both direct and indirect, to become net-zero carbon by 2030. In addition, the group commits to driving third parties in reducing their own emissions actively.*
- *Constant level of monitoring and verification of processes related to energy, air emissions, noise, water cycle and in general of the different phenomena characterizing in the interaction with the ecosystem.*
- *High level of listening, communication and involvement from/to a wide range of external stakeholders with a view to transparency, sharing and collaboration in the identification of actions useful to ensure the environmental sustainability of airport activities.*
- *Proactive presence in national and international development Bodies and programs with the purpose of contributing to the evolution of technological solutions and regulations, aimed at creating the conditions for the sustainable development of air transport.*

The Environmental and Energy Management System is periodically subject to internal and external audits. It is willing to maintain the commitment to stakeholders in the
